

Cumulative Release Notes

Version: 2.1.0

Release Date: 11/10/2021

Archive-R Enhancements:

- QuickView LT™ Multimedia Viewer is installed with archive-R, if not previously installed, providing the ability to quickly preview MXF and other media from within archive-R.

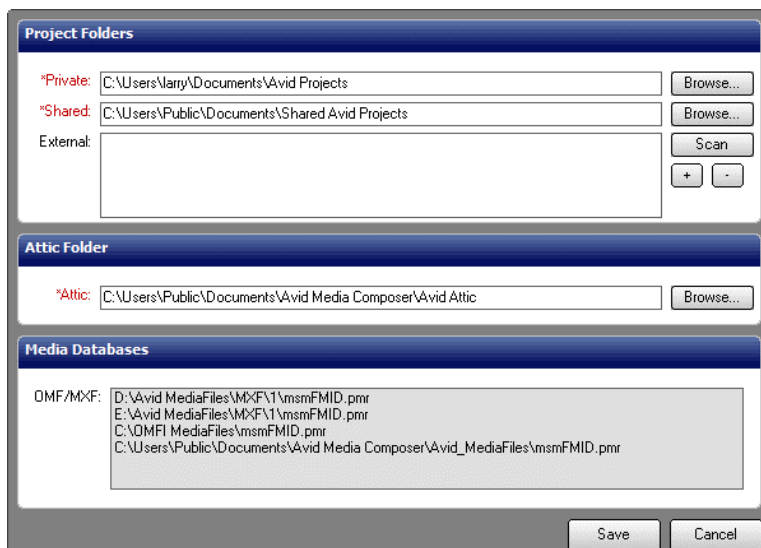

Version: 2.0

Release Date: 7/14/2021

archive-R 2.0 enhancements:

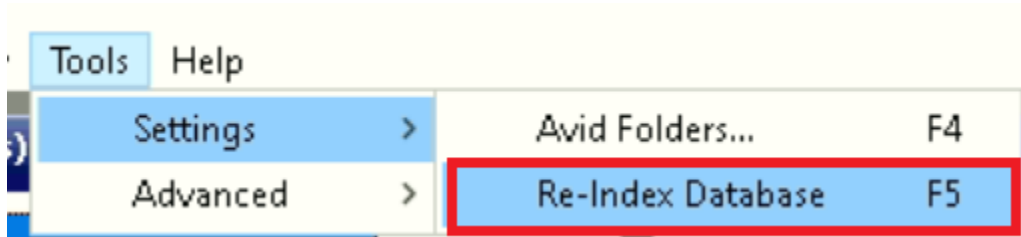

Updated database search locations & Multiple External Project Drives:

Version 2.0 has been updated to account for the recent media folder path changes introduced with more recent versions of Media Composer. The software is able to transverse all new locations and quickly associate them to their proper projects upon launch. Additionally, users can now navigate to multiple External Project Drives, if necessary.

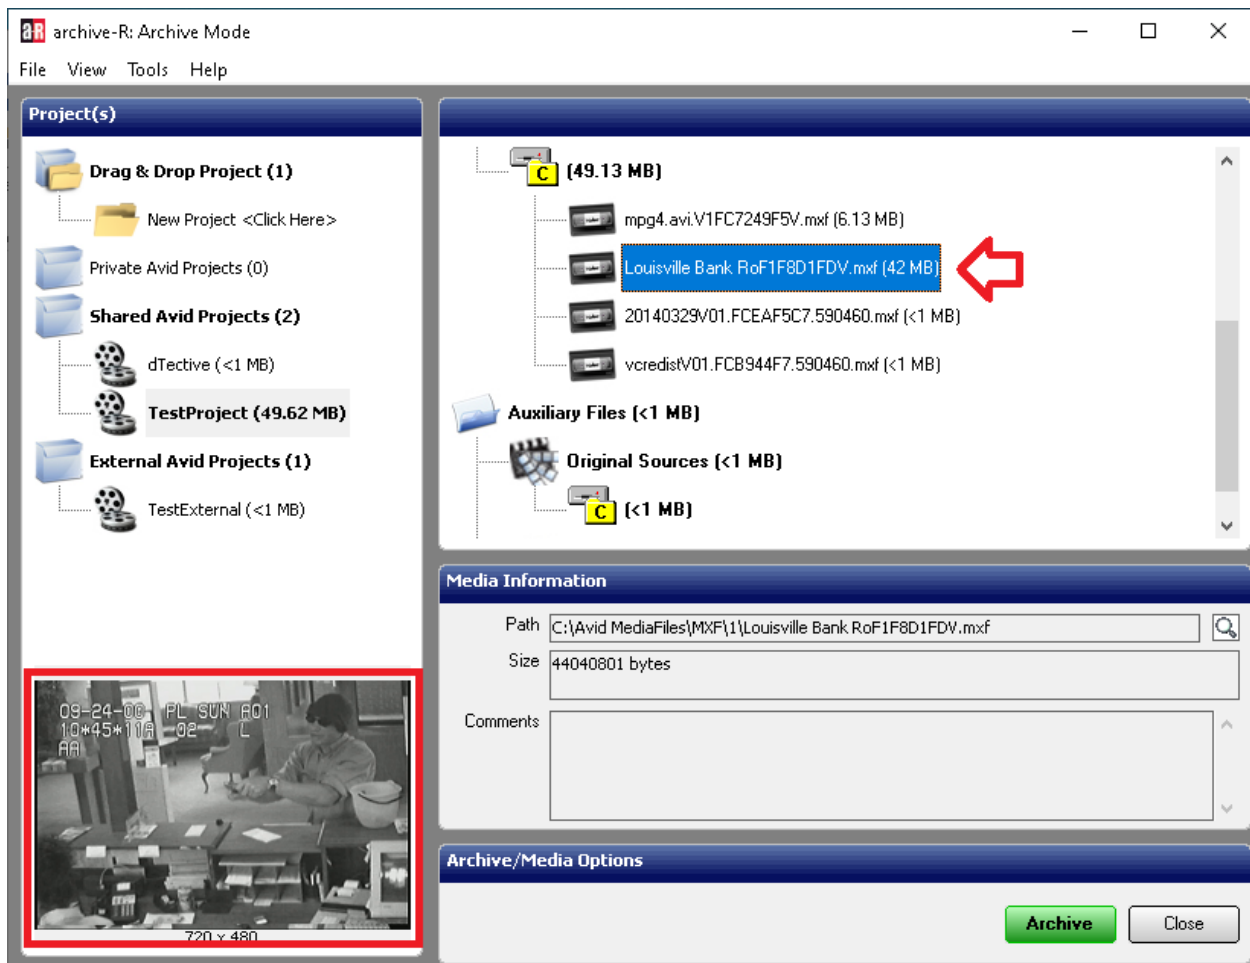

Faster Indexing algorithm

Version 2.0 comes with a new indexing algorithm which is significantly more optimized than previous versions. This means the software links media sources to its project much faster. (screenshot on following page – Tools > Re-Index Database)

MXF Media Preview

Version 2.0 leverages FFmpeg engine to render a preview of the frame of the selected MXF file. If the engine can decode the file, you will see a thumbnail preview and the video dimension information.

Works with the very latest version(s) of Avid Media Composer!

Version 2.x supports 2020.x, and even the very latest version of the **2021.x** Long Term Release (LTR)!

Maintains Miscellaneous File and Drag & Drop Folder Structure

Now when restoring a project with **Miscellaneous Files** OR when restoring a **Drag & Drop** project the source's folder structure will be maintained!

V2.0 Bug Fixes:

- Fixed issue with hash value case-sensitivity.
 - Fixed issue with archive-R and restoration log shortcuts.
-

Version: 1.13

Release Date: 4/10/2017

Bug Fixes:

- Fixed bug requiring archive-R to be unlocked after upgrading to latest from v1.09 (*shipping version*).
-

Version: 1.12

Build Date: 4/03/2017

Bug Fixes:

- Updated archive-R with logic to look for either a .XML or .AVS Media Composer settings file without producing warning message.
 - Fixed bug relating to .OPA file association not being created during installation.
-

Version: 1.11

Build Date: 3/27/2017

Bug Fixes:

- Fixed bug causing archive-R to be locked after rebooting system.
-

Version: 1.10

Build Date: 3/23/2017

Bug Fixes:

- Fixed bug causing archive-R to freeze if there was no Media Composer .avs settings file, and only the newer .xml settings file type.
-

Version: 1.09

Release Date: 6/17/2016

New Features:

- Updated installer to automatically remove previous version.

Bug Fixes:

- Fixed bug producing restoration errors when media hash is -1
-

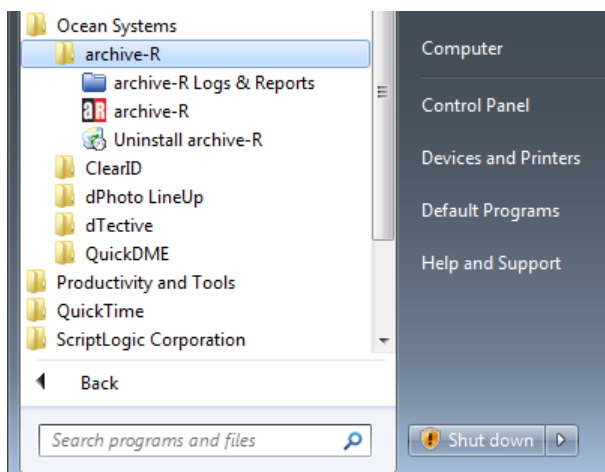

Version: 1.08

Build Date: 8/06/2015

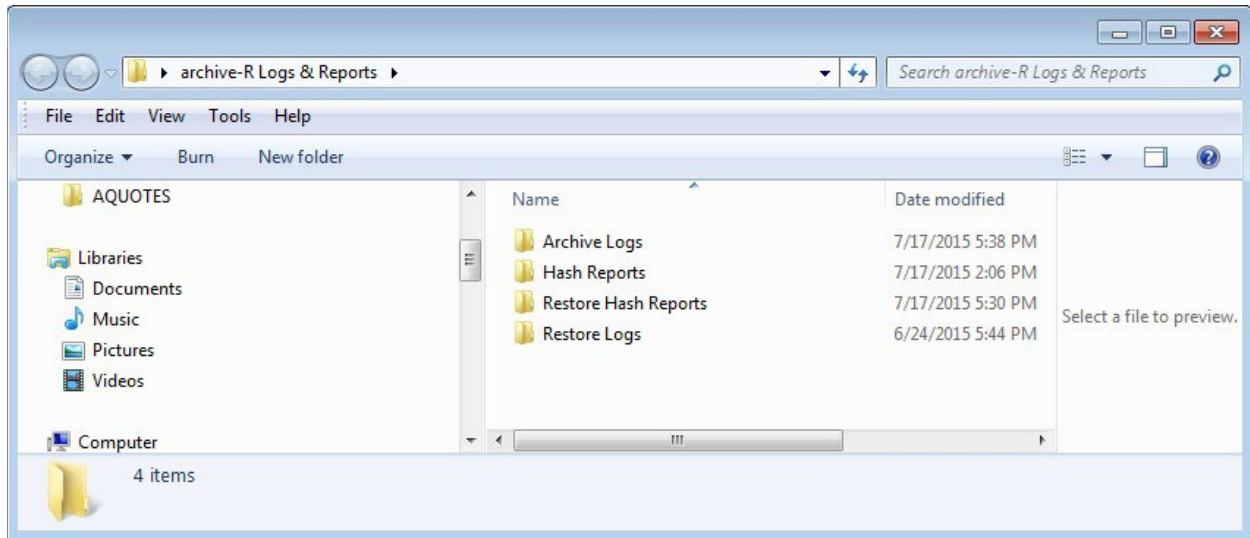

New Features:

- New archive log option on archive.

Now creates an archive log on archive if you have “hashing” selected as an archive option.

These logs can be accessed from: Start Menu > Ocean Systems > archive-R > archive-R Logs and Reports

Inside the “archive-R Logs and Reports” you will find:

- Achieve Logs
- Restore Hash Reports
- Restore Logs

NOTE: The Hash Reports folder show in the picture is a legacy from the old naming conversion which is now called Restore Hash Reports. Your previous Hash Report from restoring .OPA files before are stored in there. You can copy those into the new Restore Hash Reports folder and delete the old folder.

Version: 1.06

Release Date: 6/17/2015

New Features:

- CD/DVD/Blu-Ray burner support updated to support more devices.

Bug Fixes:

- Fixed bug producing archive error if archiving project with a 0 Kb file in it.
-
